

Module 3 - Ad Angles

[Click here for Google Doc \(Click File > Make a Copy\)](#)

Introduction ►

In this video we are going to talk about Ad **Angles**.

An **angle** is all about framing the same offer in different ways, speaking to different emotions and triggering different behaviours.

If our creative is how we target different audiences, then our ad **angle** is how we tell Meta who to look for.

Different types of **angles** attract different types of people and this is crucial with Meta's focus on creative targeting.

I'm going to teach you what an ad **angle** actually is, how to think about **angles** strategically, and how to use them to structure your creative testing.

My goal is to get you creating ads with intent and purpose and move away from random testing.

By the end of this video you should be able to break down any offer into multiple **angles** and understand how to use them to drive performance on Meta.

What Is An Ad Angle?

An **angle** is the specific way you present your offer, message or idea inside an ad.

We're not talking about the product or the format here, but specifically the **perspective** you choose to present it from.

Any product or service can be presented in multiple ways depending on what you choose to emphasise.

It's each of these presentations that is an **angle**.

These **angles** are incredibly important as everybody is going to have different needs, desires and messaging that they resonate with.

Let's use a fitness coaching business as an example and imagine they are selling a 30 day body transformation package.

There are multiple ways we can present this.

- **Speed** > Get back in shape in 30 days without spending hours in the gym.
- **Simplicity** > A simple fitness plan for busy people who hate complicated workouts.
- **Authority** > The same system used by over 1,000 successful clients.

- **Enjoyment**> Get in shape using this fun and addictive workout routine.
- **Benefit** > Improve your body confidence with this workout routine.

These could all use the same format or same offer.

The thing that changes is **the idea** that is being communicated.

This can completely change the type of person that is attracted.

The outcome is the same but the **mental entry point** changes.

Angles vs creatives

An **angle** is the idea

A creative is how that idea is expressed

One **angle** = Many creatives

One Creative = Only one **angle**

This also means that the same **angle** can be expressed as a video ad, a static image, or a carousel.

The format changes. The core idea does not.

This is important to understand because later in the module we will look at how to write and structure ads for both formats.

Creating Ad Angles For Your offer

When creating ad **angles**, we start by understanding the core problem our offer solves and the different ways people emotionally experience that problem.

Rather than jumping straight into writing ads, we want to break our understanding down into a set of clear inputs we can use to build strong **angles**.

These inputs act as ingredients. On their own they don't create **angles**, but when combined they form clear ideas we can test.

This gives us a structured way to approach ad creation instead of relying on guesswork or random testing.

We can start by mapping these inputs and then work out how our specific offer fits into each one.

- Pain Points 🚨

These focus on a specific problem, frustration, or sticking point and they work by making the viewer feel understood.

- Overweight
- Don't like the way they look
- Clothes don't fit me
- Struggle to move

- Benefits ✅

These focus on a specific outcome the viewer is looking for. They work by showing what life looks like after the problem is solved.

- More confidence
- More energy
- Wear smaller clothes size

- Objection handling ❌

These **angles** directly address common reasons people don't buy and they work by removing mental barriers.

- Don't have time
- Too expensive
- Need to be fit

- Challenges ⚠️

Challenges are based on what someone has already tried and failed with.

They are backward-looking and emotional and they acknowledge effort, frustration, and disappointment.

- Followed diets that were too strict
- Got results but they didnt last

- Identity 🧑

These **angles** focus on how someone sees themselves or wants to see themselves and work by aligning the offer with their **identity**.

They can relate to someone's lifestyle, experience or values. We can also refer to what someone 'should not be'.

- busy professionals

- Not for extreme dieters

Remember, **angles** are not audiences. Multiple audiences can respond to the same **angle**, and Meta will decide who responds based on the creative signals.

Mapping Out Your Angles 🌍

I've created a worksheet for you that's going to allow you to map out everything you need to create your own **angles** for your own offers.

This is an awesome exercise you can actually include in your client onboarding to get them involved in the process.

There's also some sections in this worksheet that are going to help us gather other components we need for building our high performing creatives, including social proof and USPs.

Prioritising angles 📊

Not all **angles** are created equal and you will likely have more than you can realistically test in one go.

You don't need to test everything at once and you'll need to work out what to test first.

We can prioritise the order to test them using 3 simple filters.

1. Strength of the pain

Start with **angles** that connect directly to a strong, emotionally charged **pain point**.

If someone feels this problem regularly or it affects their confidence, energy, or daily life, it's usually a good place to start.

Strong pain = faster feedback.

2. The amount of people it applies to

Ask yourself how many people this **angle** could apply to.

Broad **angles** tend to work best early on because they give Meta more room to find responders.

Highly specific **angles** can work well later, but they are usually better tested after you've found something that performs at scale.

3. How believable it is

Prioritise **angles** that feel realistic and easy to accept.

If an **angle** requires a big leap of faith, heavy explanation, or sounds too good to be true, it's harder for people to engage with quickly.

Clear, believable ideas usually outperform clever or extreme ones.

When choosing your first **angles** to test:

- Pick 5 **angles** that score highly across all three filters
- Start with broad, obvious ideas before niche or complex ones
- Save abstract or advanced **angles** for later rounds of testing

We want to learn which **angles** meta responds to fastest and then we can build into more complex ideas from there.

From our examples:

"Fear of staying overweight because they don't have accountability and finally having a system that keeps them consistent."

This fits all three well.

- Being overweight is a strong pain
- Accountability applies to nearly everyone
- It's believable as we have the mechanism to prove it.

We might want to avoid talking about "*beach bodies*" as this may only apply to a smaller proportion of people who are going away or live near a beach.

Remember, this isn't our hook or ad copy yet. We will work on the language and wording next.

Summary ✓

An **angle** is the specific perspective you choose to present your offer from. It is not the format, not the hook, and not the copy. It is the core idea.

One **angle** can generate many creatives across many formats. One creative only ever expresses one **angle**.

You build **angles** from five inputs: **pain points**, **benefits**, objection handling, challenges, and **identity**.

Map your offer against all five, then prioritise based on strength of pain, breadth of applicability, and believability.

Start with the **angles** that score highest across all three before moving to more specific or complex ideas.

Remember: **angles** are not audiences. Meta decides who responds. Your job is to give it strong, clear ideas to work with.

What's Next

Now that you've mapped and prioritised your **angles**, you've done the strategic work.

You know what ideas you want to test and why those ideas matter.

The next step is turning those **angles** into something people actually stop and pay attention to.

In the next video, we're going to break down hooks.

You'll learn how to take a single **angle** and turn it into multiple hooks that grab attention, stop the scroll, and give Meta the signals it needs to find the right people.
