

Module 3 - Creating Ad Scripts & Ad Copy

[Click here for Google Doc \(Click File > Make a Copy\)](#)

Introduction ►

In the last few lessons, we've already done the hardest and most important work.

We've broken down your angles and we've learned how to turn them into **hooks** that provide proper signals to meta.

Now it's time to take those **hooks** and turn them into full ads that convert.

In this video we are going to focus on ad scripts and I am going to teach you how winning Meta ads are actually structured, and how to turn your existing **hooks** into clear, believable scripts.

Think of your script as the bridge between attention and action.

The hook earns the stop.

The script builds understanding and belief.

And together, they give Meta the signals it needs to find more of the right people.

You'll see how each structure works, when to use it, and how it guides someone from problem to solution without feeling salesy or forced.

Then, instead of writing every script manually from scratch, I'll show you how to use AI properly to do the heavy lifting.

By the end of this video, you'll have a repeatable process you can use across every account you run:

Angles > hooks.

Hooks > scripts.

Scripts > ads.

This will give you a full system you can use for any client account to plan, launch and find winning ads for their account without hours of manual work.

Narrative Frameworks ➡

There are many structures you can use for creating scripts.

I'm going to give you three easy to follow structures that can be used across all your **hooks** to make multiple variations of your ads.

These aren't set writing templates but **frameworks for thinking**.

They follow very simple, repeatable structures that guide someone from attention to belief in a logical way.

Framework 1: Problem → Solution 😞➡️😊

This is the most direct framework, and it works best when the pain is already obvious.

You start by clearly describing the problem the viewer is experiencing.

You show them that you understand what's frustrating, why it keeps happening, and what it's costing them if nothing changes.

Then you introduce the solution as a logical response to the problem you've just outlined.

This framework works especially well when:

- The audience already knows they have a problem
- They've tried things before and failed
- The angle is rooted in frustration, burnout, or inconsistency

Framework 2: Before → After → Bridge 🙌🙌

This framework is all about contrast.

You paint a clear picture of what life looks like before and focus on audience pain points.

This could be the high amount of effort vs low reward, the struggle, the constant restarting.

Then you show what life looks like after. This needs to be realistic and grounded. Not hypey.

- More ease.
- More consistency.
- More progress

Once the contrast is clear, you use the bridge to explain how that change happens.

The bridge = your system, offer, or method.

This framework works best when:

- You want to show transformation without exaggeration
- The angle is about sustainability or long-term change
- You want the viewer to emotionally feel the difference

The "after" needs to be believable, not an unachievable fantasy. We can also use **social proof** to help support this.

If it feels realistic, it builds trust.

Framework 3: Myth → Truth 🤔

This framework works when the audience is stuck believing something that's holding them back.

You start by calling out a common belief. This could be something they've heard before or something they probably believe is true.

Then you introduce the truth in a calm and clear way.

You explain why the old belief doesn't work, and what actually does.

This framework works best when:

- The angle challenges a common assumption
- The audience is stuck repeating the same mistakes
- You want to reposition how they think about the problem

This is especially powerful when paired with education-based offers or systems.

No matter which framework you use, the job of the script is always the same:

- Build understanding
- Build belief
- Make the next step feel obvious

The script does not need to convince everyone and it only needs to make sense to the right person.

The Full Ad Structure ⚙️

The three frameworks above give you the narrative shape of an ad. Now we are going to add a complete sequential structure that turns that narrative into a full ad you can build element by element.

This structure works across all three frameworks and can be applied to both video scripts and written copy for statics. Think of it as a blueprint. The frameworks tell you the story to tell. This structure tells you in what order to tell it.

Hook 🚢

The **hook** is the opening of the ad. Its job is to stop the scroll, signal who the ad is for, and create enough curiosity or clarity to earn the next few seconds of attention.

You have already built your **hooks** using the angle and **hook** framework. This is where they go.

Problem Agitation 🚨

Once you have the viewer's attention, you deepen the pain.

You are not just naming the problem. You are making the viewer feel the weight of it.

How long have they had it? What has it cost them? What have they already tried that has not worked? What happens if nothing changes?

This is the part of the ad that creates emotional investment.

The viewer is not yet thinking about your solution. They are feeling the problem more clearly than they did before they saw the ad.

That feeling is what makes everything that follows feel relevant and necessary.

Moment of Realisation 😬

Before you introduce the result, the viewer needs one more thing - **clarity**.

Up to this point they are feeling the problem more intensely. But they may still believe the cause of the problem is something else such as their effort, their timing, the platform, or simply bad luck.

This is where you introduce the insight.

You reveal the misunderstanding, the hidden cause, or the flawed assumption that has been keeping the problem in place.

The viewer suddenly sees the situation differently. The problem is no longer random or confusing. It has a clear reason behind it.

That moment of understanding is powerful. When people understand why something is happening, they become far more open to hearing how it can be fixed.

Now the outcome you describe does not feel like a sales pitch. It feels like the logical result of finally addressing the real problem.

Outcome 📈

Now you introduce the **contrast**.

You paint a picture of what life looks like when the problem is solved. Not a fantasy. A believable, specific version of the result your offer produces.

This is where you build desire.

The more specific the outcome, the more believable it is.

Vague promises create scepticism. Specific results create belief. "You will get more leads" does not do the same job as "Our clients average 34 qualified leads in their first 30 days."

Unique Mechanism

This is where you explain how the outcome is achieved.

What is it about your offer, system, or method that makes the result possible? Why does it work when other things have not?

The **unique mechanism** answers the question the viewer is already asking: okay, but how? It is not a features list.

It is a simple, clear explanation of the core thing that makes your solution different and effective.

If the viewer can understand why your approach works in two to three sentences, the next step feels logical rather than risky.

Social Proof

Social proof transfers belief from you to the people the viewer already trusts: other customers.

Testimonials, case studies, client results, volume of customers, or named outcomes all serve the same purpose.

They show that the result you described in the Outcome section has already happened for real people.

Keep **social proof** specific and credible. A named result from a real client is more powerful than a vague endorsement.

Where possible, match the proof to the angle — if your angle speaks to a specific type of person or problem, your **social proof** should reflect that same person and problem.

Call To Action

The call to action tells the viewer exactly what to do next and removes any uncertainty about what happens when they do it. It should be direct, specific, and friction-free.

Weak CTAs create hesitation. "Find out more" is vague. "Click below to book your free 30-minute strategy call" tells the viewer exactly what they are clicking, what they are getting, and what the commitment is. The simpler and more specific the next step, the more likely they are to take it.

Creating Your Scripts

Now I'm going to show you exactly how we can build these.

We're going to take your offer, your angle and your hooks and feed them into a structured GPT setup that builds the script for you

I'm going to show you exactly how to set this up so that:

- The angle stays intact.
- The hook stays intact.
- The problem maps directly to your worksheet.
- The final script actually sounds like a human explaining something clearly
